LaTeX in Knitr works pretty much the same way as in Markdown. LaTeX gives you much more control over the layout and is preferred for preparing manuscripts. There are a dizzying number of packages available and, unfortunately, it can be a little tricky. We'll just introduce it here and leave it to you to explore LaTeX further if you wish.

To continue with our Cars example let's do similar things here. In the data set there are a total of 50 records.

We got used an inline code chunk to dynamically generate the number of cars like this.

```
To continue with our Cars example let's do similar things here.  
In the data set there are a total of "\Sexpr{length(cars$dist)}  
records.
```
